Open Book Assignment

SUMMER 2021

Please write your name and ID on the first page of the assignment answer script - you have to do this for both handwritten or \LaTeX submission. The last date of submission is 2-9-2021, 1159 pm. Solve all problems.

You can only submit a PDF file - image or doc files won't be accepted. Before submitting the PDF, please rename the PDF file in the format - SET_ID_SECTION.

If you use \LaTeX , you must add a screenshot of the raw code and compiled pdf side by side, in order to earn your bonus.

This set was prepared by MJM. If you have any questions, please text MJM on Slack.

1. Write the equation into the standard form of the equation of the parabola:

$$5 + 6x + x^2 - 2y = 0$$

Locate the vertex, focus and write down the equation of the directrix.

2. Write the equation into the standard form of the equation of the ellipse and sketch the ellipse:

$$-24 - 24x + 12x^2 + 3y^2 = 0$$

3. Write the equation into the standard form of the equation of the hyperbola:

$$-15 + 6x - 3x^2 + 12y + 6y^2 = 0$$

Find the center, vertices, foci, eccentricity and equation of directrices for the hyperbola.

4. For the equation

$$r = \frac{12}{5 - 8 \cos \theta}$$

- (a) find the eccentricity, (b) identify the conic, (c) give an equation of the directrix, and (d) sketch the conic.
5. Find the rectangular coordinates of the point $(\frac{4}{5}, \frac{2\pi}{3}, -2)$ which is in cylindrical coordinates.
6. Find the rectangular coordinates of the point $(4, \frac{3\pi}{4}, \frac{\pi}{4})$ which is in spherical coordinates.
7. Write the equation into the standard form of the equation of the parabola: $y^2 - 2y = 8x - 1$. Locate the vertex, focus and write down the equation of the directrix.
8. Write the equation into the standard form of the equation of the hyperbola: $-x^2 + 4y^2 - 2x - 16y + 11 = 0$. Locate the centre, vertices and foci of the hyperbola.
9. Write the equation into the standard form of the equation of the parabola: $x^2 + 4x - 4y = 0$. Locate the vertex, focus and write down the equation of the directrix.
10. Write the equation into the standard form of the equation of the hyperbola: $-4x^2 + y^2 - 16x - 2y - 19 = 0$. Locate the centre, vertices and foci of the hyperbola.
11. Write the equation into the standard form of the equation of the parabola: $y^2 + 12y = 1 - x$. Locate the vertex, focus and write down the equation of the directrix.
12. Write the equation into the standard form of the equation of the hyperbola: $-x^2 + 2y^2 + 2x + 8y + 3 = 0$. Locate the centre, vertices and foci of the hyperbola.
